

CONSERVATION AREAS

A guide for owners and occupiers

What is a conservation area?

A conservation area is an area of special architectural or historic interest, the character or appearance of which it is desirable to preserve or enhance. There are 20 conservation areas within the London Borough of Enfield with 1 new one proposed.

The legislation and guidance

The Planning (Listed Buildings and Conservation Areas) Act 1990 gives Council's the power to designate conservation areas. Government guidance on how to interpret the Act is in Planning Policy Guidance Note 15: 'Planning and the Historic Environment (PPG 15)' and Circular 01/01: 'Arrangements for handling heritage applications - notification and directions by the Secretary of State'.

What does conservation area designation mean?

The 1990 Act requires that the Council as Local Planning Authority seeks the preservation or enhancement of the character or appearance of each conservation area. Planning proposals for change of use or for new development have to be considered in the light of this requirement. Conservation area designation helps to protect an area's special architectural or historic interest by providing:

- The basis for planning policies designed to preserve or enhance all aspects of the special character or appearance of an area
- Control over the demolition of unlisted buildings
- Works to trees within a conservation area
- Stronger planning controls within a conservation area.

Whilst conservation area status may be accompanied by added controls, there are a number of benefits of living or working within a conservation area. These include:

- Preserving and enhancing the character and appearance of conservation areas maintains the attractiveness of the area, encouraging inward investment
- Conservation area property values are likely to be higher than other areas
- Conservation areas bring a heritage dividend that supports regeneration and helps create sustainable communities

- Living or working in a conservation area can stimulate the appreciation of the area's history and civic pride.

Managing change in conservation areas

The intention of conservation area designation is not to inhibit further development, or to preserve the area unaltered, but to manage change and thereby ensure that the character of the area is not diminished by future development.

In practice, this can be achieved through the preparation of a character appraisal for each area, by preparing management proposals, and by prudent development control.

A conservation area is an area of special architectural or historic interest the character or appearance of which it is desirable to preserve or enhance.

The special interest of conservation areas

Government and English Heritage guidance to Councils emphasise that it is the quality and interest of areas, rather than that of individual buildings, which should be the prime consideration in identifying conservation areas. The Council has published new guidance about the criteria it will use to identify which parts of the Borough has the necessary qualities to be a conservation area. Areas will be eligible for consideration for designation if they exhibit some or all of the following:-

- A clear and special spatial identity
- A special architectural or historic interest
- A special townscape quality

In considering these qualities, the Council will assess the physical unity, sense of place, the definition of the area, relationship between built fabric and landscape, the quality of buildings, degree of preservation, building relationships, materials, local architectural styles, topography, archaeological significance, townscape character, public and green spaces and historical interest.

Conservation areas give broader (but less onerous/prescriptive) protection than listing individual buildings: all the features, listed or

otherwise within conservation areas are recognised as part of its character (although clearly there will be some built features that will detract from the character of an area).

Control of works to dwelling houses in conservation areas

In addition to the regular planning controls, planning permission is required for certain external works to a dwelling house within a conservation area. These include:

- house extensions to the side or greater than single storey,
- the cladding of any part of the exterior,
- any addition or alteration to the roof,
- the erection to the side of the house of an ancillary building e.g. a garden shed,
- the erection of chimneys, flues or soil and vent pipes to front or side elevations fronting a highway.
- the installation of an antenna (satellite dish) on a chimney, wall or roof slope which fronts a highway or on a building that exceeds 15 metres in height,
- the installation of solar photovoltaic or solar thermal equipment on to wall elevations visible from a public place.

The Council has also made an Article 4 Direction for most of its existing conservation areas, which removes permitted development rights, so that minor works, (e.g. extensions, roof works, boundaries and window and door replacements) need planning permission. This has strengthened the Council's efforts to preserve the character of these areas. You should check with the Planning Development Team (Tel: 0208 379 1000) whether planning permission is required before making any alterations to your house.

Control of works to flats and commercial properties in conservation areas

Owners or tenants of commercial properties or flats do not have permitted development rights. Consequently, most external alterations (such as extensions, the erection of a satellite dish or replacement windows or doors) require planning permission.

The Council will require all new building work to be designed so as to preserve or enhance the existing character or appearance of the conservation area.

New development in conservation areas

Where the Council considers new development to be appropriate in a conservation area, a high standard of design is expected that preserves or enhances the character or appearance of the area. Where there is a strong homogenous architectural style new development should normally accord with that character. Where the conservation area has evolved over many years and has a variety of styles reflective of the differing eras in which they were built, a contemporary approach is likely to be favoured. In all cases special regard should be given to such matters as urban context, density, scale, height, form, massing as well as detailed design and quality of materials. The Council will be concerned to ensure that the design principles to be found in 'By Design' and other guidance produced by CABE (the Commission for Architecture and the Built Environment) or English Heritage informs the proposed new development. Informal pre-application advice for development can be obtained by contacting the Planning Development Team.

Control of demolition in conservation areas

Designation introduces a requirement for Conservation Area Consent to be obtained from the Council for the total or substantial demolition of unlisted buildings of 115 cubic metres or greater and some boundary walls (see below). Applications for Consent must be accompanied by an application for Planning Permission for a suitable replacement building.

Control of demolition of boundary walls in conservation areas

Conservation Area Consent is also required for the demolition of walls which are in excess of 1 metre high where abutting a highway (including a public footpath or bridleway), waterway or open space, or for the demolition of walls more than 2 metres high elsewhere. The removal of front boundary walls to

enable parking within front gardens often has a detrimental impact on the character of a conservation area and in most cases conservation area consent would not be given. It is always advisable to check whether permission is required when considering demolition. The Planning Team is able to provide pre-application advice regarding the acceptability of proposals.

Conservation area consent for demolition

In assessing whether or not to grant Conservation Area Consent for demolition the local planning authority must have regard to the desirability of preserving or enhancing the character or appearance of the conservation area in which the building/structure is situated and the contribution that the building makes to the special interest of the area. Where the building is identified within the Character Appraisal for the conservation area as making a positive contribution to its special interest, it is highly unlikely that the Council will give consent for its demolition.

The local planning authority or the Secretary of State may take enforcement action or institute a criminal prosecution if demolition works are carried out without first obtaining the necessary consent. It should be noted that if the property is a listed building, in ecclesiastical use, or a scheduled monument, different legislation applies involving stronger controls.

A major element of the character and appearance of many conservation areas is the trees and gardens within them.

Works to trees in conservation areas

A major element of the character and appearance of many conservation areas is the trees and gardens within them. Therefore, ill-considered works to trees may not only lead to the loss of the trees themselves, but also harm the appearance of the area, and spoil the setting of any buildings nearby.

Trees with a trunk diameter of 75mm or more measured at 1.5m above ground level within conservation areas are protected. Any works to them, which include pruning and felling, will require a written notification to the council six

weeks prior to commencing those works. Exemptions to the above are trees that are dead, dying or that have become dangerous and the pruning of fruit trees in accordance with good horticultural practice to prevent or control a legal nuisance.

Where the loss of a tree is unavoidable and it was one of an avenue of identical specimens, replanting must be with a matching tree species. Where planting is more varied, a native species traditional to the area would be appropriate.

Caring for conservation areas

It is important that everyone with a stake in a conservation area plays their part in its care. The active involvement of local amenity groups, residents' associations and local people are essential to ensure that the conservation area is monitored, maintained and infringements reported. The Council has a Conservation Advisory Group made up of interested Members and representatives of conservation area amenity societies that focuses on how best to preserve Enfield's heritage. Perhaps you might be interested in joining your local group?

To support its conservation areas the Council publishes two key documents:-

1/ The Conservation Area Character Appraisals gives all stakeholders a clear understanding of what the special interest of each area is, which buildings make a positive contribution and what forms of development may be appropriate.

2/ The Conservation Area Management Proposals detail the opportunities for improvements in each conservation area and the actions the Council proposes to take.

The above documents can be downloaded from the Council's website – www.enfield.gov.uk – follow the links to Environment and Planning/Conservation.
